P A R I S

Always inspired by the passion for details in the bathroom, THG Paris offers towel warmer models that combine heritage and style, tradition and innovation, know-how and craftsmanship.

## THG PARIS TOWEL WARMERS' BENEFITS

- Created and developed by a French specialist in bathrooms and fittings which incorporates its own foundries, bar turning, polishing and multi-layer surface treatment workshops, they benefit from its know-how and expertise in high-end metal working.
- Made of brass, a durable material and an excellent thermal conductor that eases a rapid rise in temperature.
- Designed to limit any risk of leakage by eliminating water welding in manufacturing processes.
- Individually tested after assembly and tested for pressure, temperature and tightness.
- Available in 21 THG Paris colors, including 10 PVD (Physical Vapor Deposit) colors known for their high resistance and durability. Two-tone finishes are also available.
- Possibilities of creating bespoke models, for hotels and private residential projects.
- Made of recyclable materials, they also have a limited carbon footprint.

## COMFORT, SAFETY AND AESTHETICS

### HYDRONIC VERSION

The THG Paris hydronic towel warmer is powered by hot water from the central heating system.

It has shut-off and control valves to optimize heat distribution. These valves can be decorated with THG Paris stylised crosspieces (143 models available) and match your THG Paris fittings.

Power consumption: 98 to 380 W

### ELECTRIC VERSION

The THG Paris electric towel warmer has an IP55 dust and water protection rating.

Available in Class I and II, it can be installed in the "volume 2" and "out of volume" areas of the bathroom. It quickly diffuses uniform heat while protecting its users thanks to a contact temperature limited to 60°C. Designed in hidden electricity (no visible wires or additional arms), it looks like its hydronic cousin and is a safe and aesthetic option.

Power: 50 to 200 W
