

MATT UMBER PVD

The Matt Umber PVD finish recalls the natural tones used by the Old Masters to create their masterpieces. Darker than Light Bronze finish, and featuring red highlights, the brushed process applied by hand imparts a more contemporary look. Applied using the PVD surface finishing process, the finish is extremely durable and is particularly recommended for brassware and accessories specified in a contract environment.

CHARACTERISTICS

The Matt Umber PVD finish is applied with the Physical Vapor Deposit surface treatment process, or PVD. This breakthrough technology, borrowed from the watch making industry, is characterised by the vaporisation of a metal alloy, in a plasma gas environment, which is then deposited, with precision, on the surface of THG Paris brassware and accessories.

This treatment offers the possibility to create a much larger array of colours and shades, when compared to traditional surface finishing treatments, by leveraging the composition of the metal alloy and the plasma. THG Paris exclusively uses a Titanium/Zirconium alloy, renowned for its hardness; this is the main component which contributes to the finish exceptional mechanical resistance. THG Paris PVD finishes are applied over a layer of nickel and chrome, thus guaranteeing an excellent resistance to corrosion.

The brushed aspect is applied by hand before the PVD stage

ADVICE

Ease of cleaning: Very easy
Corrosion resistance: Excellent
Scratch resistance: Excellent
Resistance to cleaning products: Excellent
