

POLISHED CHROME - POLISHED GOLD

Chrome adds a bluish tint to the tap fittings which, although somewhat cold, it can be warmed by the addition of a distinguished metal: gold. This alloy of chrome- and gold-plating is a bold choice which can enliven a contemporary or industrial design, or soften the retro aspect of a transitional design.

Reference: G02

CHARACTERISTICS

The chrome is created over an underlayer of polished nickel. It is a durable finish which is virtually impervious to wear or scratches and resistant to corrosion and common bathroom cleaning products. The gold part, consisting of almost 100% pure gold deposited over a nickel underlayer, ensures excellent corrosion resistance and durability. With suitable care, this complex coating will maintain its sparkle.

ADVICE

Ease of cleaning: Easy
Corrosion resistance: Good
Scratch resistance: Good
Resistance to cleaning products: Good
