

MATT COLD COLOR PVD

Matt gold is a little more pure and modern than polished gold, while retaining the same sense of quality and elegance, but in a more contemporary context. This matt gold finish created with the pvd process ensures a highly resistant finish.

Reference: H53

CHARACTERISTICS

Matt gold PVD is produced using PVD (Physical Vapor Deposit) technology, which consists of spraying an alloy of metals and gases onto faucets and accessories. The color of the PVD varies according to the composition of the gases and metals that make up this alloy. We use Titanium and Zirconium, known for their great hardness; they are the ones who improve the mechanical strength of the product. Our PVD are made on a sub-layer of nickel and chromium, the assembly ensuring excellent resistance to corrosion. The brushed appearance is performed manually on each of the parts before PVD deposit.

ADVICE

Ease of cleaning: Very easy
Corrosion resistance: Excellent
Scratch resistance: Excellent
Resistance to cleaning products: Excellent

INSPIRATIONS

All the THG Paris coatings are created in our workshops.
