

NICKEL COLOR PVD

Nickel, on the other hand, is a metallic finish whose glowing reflections give it an overwhelmingly warm feel. Very common once upon a time, nickel is coming back into fashion for its vintage appearance. This finish is appropriate to classical, luxury styles, but is equally suitable for industrial style products, where it can add a touch of elegance and whimsy.

Reference: H55

CHARACTERISTICS

Nickel PVD is produced using PVD (Physical Vapor Deposit) technology, which consists of spraying an alloy of metals and gases onto faucets and accessories. The color of the PVD varies according to the composition of the gases and metals that make up this alloy. We use Titanium and Zirconium, known for their great hardness; they are the ones who improve the mechanical strength of the product. Our PVD are made on a sub-layer of nickel and chromium, the assembly ensuring excellent resistance to corrosion. The brushed appearance is performed manually on each of the parts before PVD deposit.

ADVICE

Ease of cleaning: Very easy
Corrosion resistance: Excellent
Scratch resistance: Excellent
Resistance to cleaning products: Excellent

INSPIRATIONS

All the THG Paris coatings are created in our workshops.
Our complete mastery of products and finishes gives you complete security and the best guarantee
