

GRAPHITE PVD

The Graphite PVD finish stands out as it features shades of light and deep, nearly black, greys. Dark and luminous, nearly translucent, this bright finish lifts the appearance brassware and bathroom accessories and lends it a refined industrial look. The Graphite PVD finish enhances modern and industrial brassware collections and is especially recommended for hotel project end-use.

CHARACTERISTICS

The Graphite PVD finish is applied with the Physical Vapor Deposit surface treatment process, or PVD. This breakthrough technology, borrowed from the watch making industry, is characterised by the vaporisation of a metal alloy, in a plasma gas environment, which is then deposited, with precision, on the surface of THG Paris brassware and accessories.

This treatment offers the possibility to create a much larger array of colours and shades, when compared to traditional surface finishing treatments, by leveraging the composition of the metal alloy and plasma. THG Paris exclusively uses a Titanium/Zirconium alloy, renowned for its hardness; this is the main component which contributes to the finish exceptional mechanical resistance. THG Paris PVD finishes are applied over a layer of nickel and chrome, thus guaranteeing an excellent resistance to corrosion.

ADVICE

Ease of cleaning: Very easy
Corrosion resistance: Excellent
Scratch resistance: Excellent
Resistance to cleaning products: Excellent

INSPIRATIONS

All THG Paris finishing treatments are carried out in our workshops in France. We control all our manufacturing processes to guarantee your peace of mind.
